

The supported Adobe® version for the SSEM Version 5.0+ is currently Adobe® 8. Adobe® has issued an upgrade to version 9 which is not supported by SSEM. If a user chooses to perform the automatic update for Adobe®, they may have issues viewing and saving forms in SSEM. The user must remove Adobe® 9 from the computer before downloading Adobe® 8. Below are directions to navigate through the Adobe® website to find the correct version.

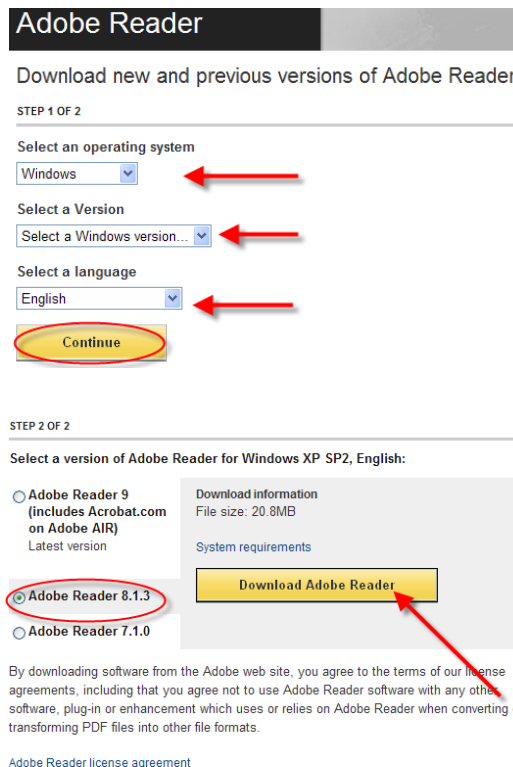

The link to get Adobe® reader is located in the middle right hand corner of the Adobe® homepage. Clicking on the “Get Adobe® Reader” link will open the next step in the process.

Once arriving to the Adobe® Reader page, you will need to selecte “Different language or operating system?”

Selecte an operating system, version and language by using the drop down options. Once selected, click “Continue”.

Step 2 of 2 will show once the previous step is completed. You will now have an option to download “Adobe Reader 8.1.3”. Select version and choose “Download Adobe Reader”. This may take several minutes to download.
